	PlanetPress Office	●	√	√	●
	PlanetPress Production	●	√	●	●

* Document Input stands for PDF input and Windows Input using PlanetPress Printer Driver set to PDF. It also includes all related tasks like Create PDF, scripting with the PDF API, and all PDF input related tools like PDF Splitter, conditions using PDF emulation etc.

** PCL, PostScript, Thermal, InkJet etc

Capturing and Printing with PlanetPress Design

PlanetPress Design will let you capture PDFs regardless of the Workflow tool involved if any. The same way, it will let you print on any PostScript printer or Windows queue, but there will be watermarks if your output does not correspond to what is allowed by the workflow tool license or if a printer license is required.

PlanetPress Design tool does not detect which Workflow tool is installed on another machine of the same subnet. Therefore, when you print, you must select PlanetPress Workflow Tool Printer Queue tab to select a printer queue on which to print.

PRINTING WITH PLANETPRESS DESIGN TOOL	PRINT		PRINT USING A WINDOWS DRIVER
	Local computer printer queues	PlanetPress Workflow Printer Queues	
Stand alone PlanetPress Design Tool	Requires Printer license	N/A	Watermark
PlanetPress Design Tool w/ local Workflow Tool	According to Workflow tool license	According to Workflow tool license	According to Workflow tool license
PlanetPress Design Tool and remote Workflow Tool	Requires Printer license	According to Workflow tool license	Watermark
